

# **QUALITY POLICY**

AMT is committed to providing world-class innovative products that uniquely fill the growing needs of small molecule and large molecule separation scientists.

We take pride in delivering products that exceed customers' expectations on quality and delivery time and collaborate to break down any barriers that would prevent an exceptional customer experience. We continually strive to improve our organization to stay focused on safety, quality, and cost.

We embrace ISO9001 standards in our work systems and daily work. We pledge to have dynamic leadership promoting culture of excellence embedded in every employee.

### **INNOVATION YOU CAN TRUST - PERFORMANCE YOU CAN RELY ON**

# ENVIRONMENTAL SOLUTIONS

HALO® ENVIROCLASS is the newest family of products in Advanced Materials Technology's product line. Comprised of chromatography columns designed specifically to address environmental analysis,

HALO<sup>®</sup> delivers results. Built upon proven Fused-Core<sup>®</sup> technology, HALO<sup>®</sup> ENVIROCLASS delivers high efficiency separations with the rugged performance required to meet challenging environmental sample matrices.

From performance designed application specific phases to separate per-and polyfluorinated alkyl substances (PFAS) and polycyclic aromatic hydrocarbons (PAH), HALO® ENVIROCLASS represents more than method assured products. It offers a suite of solutions for other persistent, high environmental-impact contamination agents such as pesticides, mycotoxins, herbicides and more all based upon HALO's 15 years of innovative and trusted technology all with the understanding of the unique needs of the environmental laboratory.

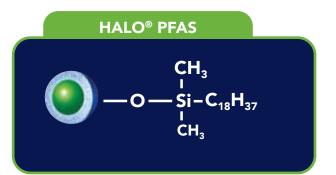

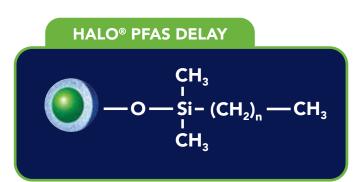

# HALO<sup>®</sup> PFAS

Designed for separation of novel and legacy short chain and long chain PFAS compounds containing branched and linear isomers, along with EPA methodology requirements in mind, HALO® PFAS offers a holistic solution. With both a PFAS specific delay column optimized to prevent background PFAS contamination from interfering with the sample results and an analytical column for PFAS sample separation and detection, the HALO® PFAS solution delivers excellent selectivity, peak shape and necessary retention to perform fast, high resolution separations in EPA methods 537.1, 533 and 8327.

The HALO® PFAS solution is different from other C18 offerings in that it is quality assured for PFAS analysis providing confidence it will meet application demands.

- Application-assured through method qualified lot analysis
- Optimal 2.7 µm Fused-Core<sup>®</sup> particle for rugged, reliable performance delivering high efficiency, low back pressure separations
- Endcapped alkyl phases for high sensitivity (no bleed) LCMS analysis
- Pressure limit: 600 bar/9000 psi

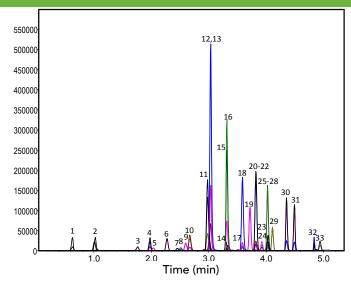

### APPLICATIONS

- EPA 533
- EPA 537.1
- EPA 8327
- Emerging PFAS

### RAPID ANALYSIS OF 33 PFAS COMPOUNDS IN UNDER 5 MINUTES

High speed separation of 33 PFAS species found in EPA 537.1, EPA 533, and EPA 8327, completed in under 5 minutes.

#### **TEST CONDITIONS**

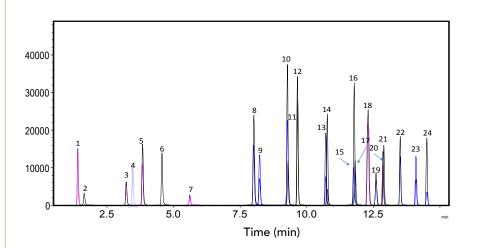

Analytical Column: HALO<sup>®</sup> PFAS, 2.7  $\mu m$ , 2.1 x 100 mm Delay Column: HALO<sup>®</sup> PFAS Delay, 2.7  $\mu m$ , 3.0 x 50 mm Mobile Phase A: 10 mM Ammonium Acetete Mobile Phase B: Methanol

Gradient: 33-98 %B in 4.0 min: 98-100 %B in 0.1 min.; hold @ 100 %B for 2min. Flow Rate: 0.4 mL/min Pressure: 479 bar Temperature: 35 °C Injection Volume: 2.0 µL Sample Solvent: Methanol (96%) Water (4%)

# HALO® PFAS DELAY COLUMN

HALO<sup>®</sup> PFAS Delay is an application assured column solution. The delay column is used to prevent background PFAS contamination from interfering with the PFAS of interest that are separated with the analytical column. The delay column bonded phase is a highly retentive endcapped silane chosen for its ability to demonstrate delay of background instrument PFAS contamination across multiple mobile phase conditions. For this reason, the HALO<sup>®</sup> PFAS Delay column is placed upstream of the sample injector.

### DEMONSTRATION OF THE HALO® PFAS DELAY COLUMN

Demonstration of the delay column utility for PFOA extracted ion. The prevalence of PFOA is commonly observed as an instrument materials contaminant- therefore is important to be separated from sample containing PFOA for accurate quantitation.

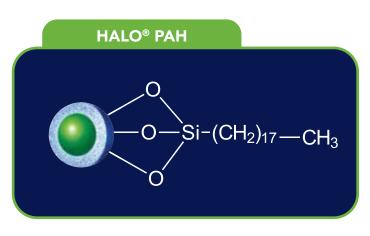

# HALO<sup>®</sup> PAH

The HALO® PAH is an un-endcapped trifunctional C18 bonded phase with proprietary manufacturing process designed on proven Fused-Core® technology to provide a fast, efficient separation of PAH compounds.

The HALO<sup>®</sup> PAH delivers a method-specific, robust, high efficiency separation of 16 standard PAH compounds with a resolution value of at least 1.5 in under 5 minutes for EPA 8310 and EPA 610.

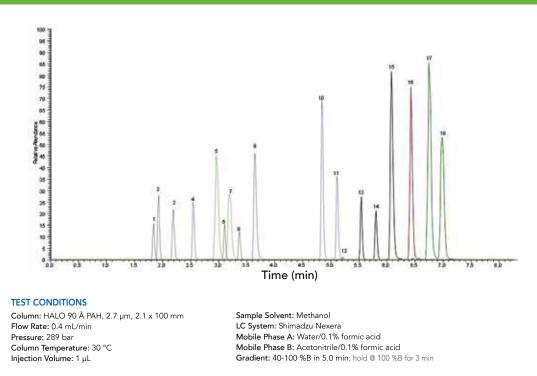

- Application-assured through method qualified lot analysis
- Optimal 2.7 µm Fused-Core<sup>®</sup> particle for rugged, reliable performance delivering high efficiency, low back pressure separations
- Well suited for UV, Fluorescence and MS detection
- Pressure limit: 600 bar/9000 psi

### APPLICATIONS

PEAK #

- EPA 610
- EPA 8310 +2
- EU 15+1
- Emerging PAHs

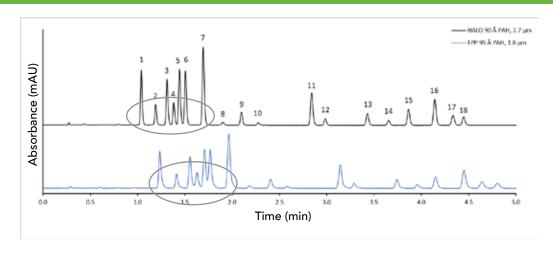

1	Naphthalene

17	Benzo[ghi]perylene
18	Indeno[1,2,3-cd]pyrene

#### **TEST CONDITIONS**

Column: HALO 90 Å PAH, 2.7 μm, 4.6 x 50 mm Competitor Column: FPP 95 Å PAH, 1.8 μm, 4.6 x 50 mm Mobile Phase A: Water Mobile Phase B: Acetonitrile Gradient: 50-100 %B in 4 min; hold @ 100 %B for 1 min. Flow Rate: 1.8 mL/min HALO® Back Pressure: 256 bar Competitor Back Pressure: 344 bar Temperature: 30 °C Detection: 280 nm Injection Volume: 2 µL

#### SEPARATION OF EU 15 + 1 USING HALO® PAH

The separation is completed on a  $4.6 \times 50 \text{ mm HALO}^{\circ}$  PAH column in less than 8 minutes with excellent resolution between the critical pairs 4 and 5 which only differ by the presence of a methyl group in this EU 15 + 1 separation.

# **ENVIROCLASS SOLUTIONS**

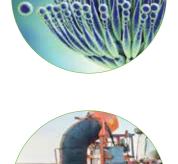

For the protection of human and environmental health, increased research and regulations of chemicals continue to drive more challenging separation and detection demands. HALO® provides a portfolio of selectivities and particle sizes designed for analysis of small molecules of interest to environmental scientists. Whether your research is driven by HPLC, UHPLC, or LCMS, HALO® offers a tailored solution for your demands.

MYCOTOXINS: toxins produced by molds (fungi) and can accumulate in crops, where they pose health hazards to humans and animals.

PESTICIDES: any substance used to kill, repel, or control certain forms of plant or animal life that are considered to be pests.

HERBICIDES: a broad class of pesticides that are used to remove nuisance plants.

CARBONYL COMPOUNDS: significant source of organic carbon balance in both aquatic and atmospheric oxidation processes of hydrocarbons often from vehicle emissions and industrial plants.

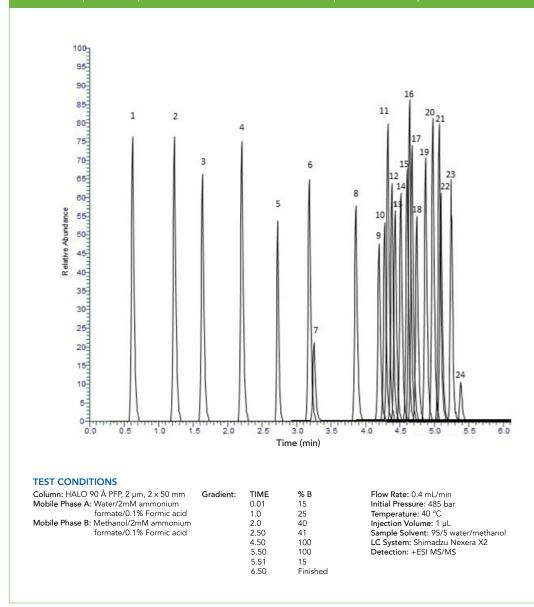

## **MYCOTOXINS**

The 2 µm HALO<sup>®</sup> PFP is an ideal choice for high throughput LCMS analysis of mycotoxins, in which multiple isobaric species separation is needed. Here 24 compounds are separated in 5.5 minutes.

PEAK #	COMPOUND
1	Nivalenol

### PESTICIDES

High resolution LCMS separation of pesticides using HALO<sup>®</sup> Biphenyl, which offers 100% aqueous compatibility, ideal to enhance retention of the early eluting polar pesticides.

## 11 triazine pesticides are separated in less than 8 minutes using a HALO<sup>®</sup> AQ-C18 column for its symmetrical peak shape and high resolution.

# OTHER SMALL MOLECULE HALO® OFFERINGS FOR ENVIRONMENTAL APPLICATIONS

Below is a list of other phases that accomplish complex separations for environmental needs as well as many other applications of interest for small molecule separations.

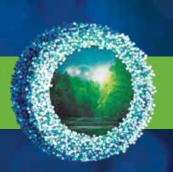

## SMALL MOLECULE

BONDED PHASE	FEATURES AND BENEFITS	
AQ-C18	<ul> <li>Ideal for mixtures of polar and non-polar solutes</li> <li>High retentivity of C18 with alternate selectivity</li> <li>100% aqueous compatible</li> </ul>	
C18	<ul> <li>Universal phase for acids, bases and neutral solutes</li> <li>Excellent stability at low to mid mobile phase pH</li> <li>Wide range of published literature applications</li> </ul>	
HILIC	<ul> <li>Ideal for polar analytes</li> <li>Alternate mode to reversed-phase modes</li> <li>Can be used in HILIC and normal-phase modes</li> </ul>	
C8	<ul> <li>Ideal for broad range of analytes</li> <li>Less hydrophobic (less retentive) than C18</li> <li>Better ion-pair applications than C18</li> </ul>	
ES-CN	<ul> <li>Ideal for polar analytes</li> <li>Alternate selectivity to alkyl phases</li> <li>100% aqueous compatible</li> </ul>	
PHENYL-HEXYL	<ul> <li>Ideal for separating aromatic compounds using pi-pi interactions</li> <li>Alternate selectivity to alkyl phases</li> <li>Also available with 160 Å pores for peptide mapping</li> </ul>	
BIPHENYL	<ul> <li>Ideal for aromatic (pi-pi) compounds</li> <li>Alternate selectivity to alkyl phases</li> <li>100% aqueous compatible</li> </ul>	
PFP	<ul> <li>Ideal for aromatics and electron-rich compounds</li> <li>Alternate selectivity to alkyl phases</li> <li>Useful in RPLC and HILIC modes</li> </ul>	
RP-AMIDE	<ul> <li>Ideal for basic compounds (alcohols, acids, phenols, catechins)</li> <li>Alternate selectivity to alkyl phases</li> <li>100% aqueous compatible</li> </ul>	
PENTA-HILIC	<ul> <li>Ideal for polar compounds poorly retained in RPLC</li> <li>Alternate selectivity for HILIC mode</li> <li>Excellent peak shape for basic compounds in HILIC mode</li> </ul>	
C30	<ul> <li>Ideal for hydrophobic, long chain, structurally related isomers</li> <li>Alternate alkyl phase with high shape selectivity</li> <li>100% aqueous compatible</li> </ul>
