ACCURACY AND PRECISION

Calibration curves were generated using PFAS standards and isotopically labelled internal standards between 0.005–2.5 ng/mL (Figure 1). Table 1 shows accuracy values calculated for triplicate injections of the calibration standards. Good precision from multiple mid-level QC samples (n=6) was obtained (Table 2).

Table 1: Example accuracy data for ADONA calibration curve between 5 to 2500 ng/mL (Internal standard: $^{13}\text{C}_2\text{-PFOA}$). *The corresponding in sample concentration takes into account the 250x concentration step during sample preparation specified in EPA method 537.1.
